FLIGHT NO. 3 VOL. 55

Published Quarterly Terry Ballowe, Editor 1740 Edinburg Gap Road Edinburg, VA 22824 540.984.8208 540.333.1310 vbaflight@yahoo.com

FLIGHT Deadline

deadline for Winter issue of FLIGHT will be January 14, 2013. Please submit articles of interest to the editor prior to that date. Send us your letters, stories or photos. This is your magazine and we encourage your contributions!

From the President

Another tournament season is over and by now many of you have been out in the woods hunting. While you are sitting in that tree stand or your easy chair, let us take a moment to look back over this past season.

Every thing started out great with excellent attendance at sectional Indoor Shoots. This was followed up by a very good showing at the Spring Classic 3D hosted by Singer Glen. This was there first State Shoot and they did an excellent job. In May we had the State Open with a fair number of shooters and, as usual from Sherwood, a well-run shoot. But then what happened?

The Fall Classic 3D had a poor turn out with only 44 shooters. This may have been in part because the IBO Worlds were the same week end, but why did only forty-nine attend the State

Closed? Two Rivers did an excellent job getting their range in top shape, they roasted a pig for meals on Saturday, and had several novelty shoots lined up but only a couple of archers shot. What more could they have done to attract shooters, or more important, what more can the VBA do to support these shoots? Let us all put on our thinking caps and come up with some suggestions for next year. Send them to me or have your Delegate bring them to the January meeting.

As winter approaches and another year comes to an end, it is time again to look to the future. Next year is an election year for the VBA. If you or someone you know is interested in running for a VBA office, please contact Robin Vogel. She is Chairperson for the Nominating Committee and is looking for candidates to commit by the January Meeting.

Our 75th year is coming up soon and Paul Vogel has agreed to Chair a Committee to explore ideas for this historic event. If you would like to serve on this committee or just have some new suggestions, please contact Paul. The VBA would really like to have some great events but this will require your support and help.

Finally, I have asked Irene to explore ways to publicize The VBA to those out there who have never heard of our organization. As busy as she is with her regular duties, she will also need some help. So, again, if you have ideas or can volunteer some time, please contact Irene.

So in closing, I sincerely hope you all had a good year, successful hunts, and are looking forward to another new year in archery.

Rob Pecora President

From the Executive Vice President

It's now time for most of us to be enjoying the main reason we got into archery, hunting season, I know that for me it is the main reason I first joined an archery club. I knew I needed to practice before I ever took aim at an animal with my bow and I could not do that at home with all of the house's surrounding mine so I joined my local club. Now I spend every moment I can chasing brown furry critters around the woods in the fall and shooting paper and foam targets the rest of the year, I think I might have an addiction.

This time of year I also want everyone to have a great hunting season but mainly I want everyone to be safe in pursuing your critters in the woods, wear your safety harness, you don't want to find out how hard the ground can be and I'll bet that you will not bounce all that well either.

After your hunts are over and you are admiring the results of your efforts please send me your photos of your conquests and if you have some tall tales of the hunt please put them to paper and send them to me, we all like to hear about the big ones that got away. Don't worry too much about spelling or grammar I have spell check and grammar check. You can send them to vbaffight@yahoo.com or you can use USPS, they need all the help you can give them, my address is on page 2.

Have a great hunting season and a great Fall and just remember that after hunting season is over indoor archery season starts and I need that to feed my addiction, what a great sport!

Terry Ballowe Exec. VP

From the Field Vice President

Tournament season is now over and hunting season is beginning. If your area is like mine, anytime you ride down the road you see people in their yards with their archery hunting equipment. Not to mention in the shops buying new equipment. Some bows will never be shot until a deer is in their sights. You need to talk to these people about the local clubs and the VBA, whether in the shop or stopped on the side of the road. Most people don't know there is an archery club within a mile of where they live. Don't forget to mention the VBA and then the questions will start. By the time you leave they will be on their way to checking out your range. Remember most of our family of competition archers came from hunters.

It's time to get ready for the winter season. Contact your local clubs with indoor facilities for dates and times. Some clubs will start their 3D's in January. This will most likely be before you receive your VBA schedule cards, so check with your clubs early so you can plan to attend. All clubs need your support.

Our newest club (Lake Country) is moving and would like everyone's help. The New Address is 1677 Shiney Rock Rd. Clarksville, Va 23927. For more information contact them by e-mail at lakecountryarchers@live.com

This is a good time to reflect back on the year. I would like to thank the shooters that made it to the state tournaments this year. Indoors was 159, 3D Spring was 105, Open was 67, 3D Fall was 39, Closed was 50 and gave a total of 193 awards. If you didn't make it please let me know if there is something that could be changed, all suggestions will be considered.

Thank you,

Page 4 **FLIGHT**

From the Publicity Director

As we conclude the year, we would like to 'thank' the clubs that hosted our state tournaments and everyone that participated. Although the attendance could have been a lot better, those that attended were a great asset to the hosting clubs as well as the VBA. Hopefully, we will see more archers at the VBA State Tournaments next year. Congratulations to all of you!

We would also like to recognize our clubs that held 'benefit' shoots. Those organizations appreciated what you do for them and it gives our clubs the opportunity to let others know that we support them.

The upcoming 2013 VBA meetings and State Tournaments can be found on the inside back page of FLIGHT and will soon be on our website.

VBA News

Our website is starting to receive inquiries about the VBA, finding a club near them, on how and where to join, IBEP classes and to learn about archery. Folks are using the website to search information on various categories: our affiliated clubs, VBA articles, news, member articles, IBEP, FLIGHT publications, minutes of the meeting, the VDGIF, links to other organizations and much more.

Over the years, we have had many discussions on how to increase membership in the VBA. I have emphasized this so many times, but I can't do it alone. I need your help to get the word out to folks that don't know about us and what we do! I ask that each club contact their local news media, your schools, and other organizations in your area. Let them know about your club, your events, classes, etc.

At the Western Regional Big Game show, Dave Proctor and his members from Bowhunters of Rockingham, once again represented the VBA. The visitors were well received as they answered many questions about the VBA, our support with bowhunting in Virginia, treestand safety, working the DGIF folks and sharing experiences and ideas.

As the bowhunting season comes to a close, don't forget to submit your 'Application for VBA Game Awards' to Marie Bell by March 1st, so the Bowhunting committee can get the awards ready for our upcoming VBA Awards banquet that will be held on Saturday, March 23, 2013.

Also, Terry and I need pictures and write-ups on your deer, bear and turkey that you have harvest.

VDGIF News

The DGIF is in the middle of their biennial regulations cycle for public input period. They are asking for our help to make comments about any deer regulation issues on their website at https://www3.dgif.virginia.gov/web/ scoping/hunting-and-trapping. They have approximately 300 on-line comments so far. After the public input period closes (July 1 to November 1) they will meet as a staff using the public input draft regulation proposals. Those staff proposals will be presented to their Board in early March. During March and April they will be accepting comments on those preliminary proposals advertised by the Board. The final proposals will be presented to the Board for adoption, amendment, or rejection in early May and if adopted will become effective July 1, 2013.

The Black Bear Management in Virginia survey and the Development on Wild Turkey Management Plan is underway. To get more information on the development and outcome, go to the Outdoor Report.

Occasionally, I receive inquiries as to where to find the VDGIF regional map. Go to www.dgif.virginia.gov/map. pdf or wildlife/deer/dmap-map.pdf.

The upcoming Youth Deer Hunting Day is on September 29th and the Youth Fall Turkey Hunt Day is on October 20th. If any youths from your club have harvest a deer and/or turkey on those days, please submit their picture(s) to Terry for *FLIGHT* and to me for the website and the Outdoor Report. Include their name, age, club, harvest weight and a write-up.

Recently, I attended the Virginia Outdoor Sportsmen Show (VOSS) working with Matt Knox and other biologist, and the Virginia State Fair DGIF/CWF booths. In October, I will be attending the Pr. William Heritage festival, the Mason Neck Fall festival, working at the CWD check stations and other DGIF events. By volunteering at these events, it gives me the opportunity to meet bowhunters of all ages and to get the word about the VBA.

Until next year, have a great hunting season, use your treestand harness, keep your bows tuned, be safe and take a youth hunting!

From the NBEF/IBEP Director

Finally! Another Virginia bow season is here, with all the promises of big bucks and great times afield with your bowhunting friends and family!

Before you kick off this season, let's talk safety. If you read my articles, you know that falling from a tree is the #1 risk to you coming home safely after a hunt. Therefore, the best piece of bowhunting equipment you own is your rear attached full body fall arrest harness. It should always be used, from the time you take your first step off the ground until you are safely standing at the base of your tree after your hunt. Safety ropes that remain attached above your lock-on treestand allow you to climb without fear of falling. An alternative is a lineman's belt around the tree as you ascend a climbing stick or ladder, then hooking into your safety rope before you step over into your stand. When using a climbing treestand, hooking into your safety line that is attached to the tree and moving it upward as you ascend will keep you safe. Once in your stand, adjust your safety rope so that your hips won't go below the platform if you fall. That allows you to self recover back onto your platform if you do fall. It also shortens the distance you fall, and avoids the trauma of a very sharp stop when you reach the end of your safety rope. All of this should be second nature to any bowhunter, and something the more experienced among us pass on to newcomers to our sport, both by word and by setting the example with our actions.

As great as a rear attached full body fall arrest harnesses are at protecting you from a fall, they don't come without their own inherent dangers and risks. Hanging suspended can cause serious injury or even death in as little as 30 minutes, a phenomena knows as Suspension Trauma. Dr. Norman Woods, a physician who has done considerable research in this area, describes suspension trauma in the following way: "Hanging suspended in your FAS after a fall will cause the leg straps to restrict blood circulation from the legs back to the heart. This will cause blood to pool in the legs and create a rapid overall decline in blood circulation. A subsequent rapid deterioration of blood pressure, oxygen delivery to the brain, heart and other vital organs will occur. If not corrected immediately, unconsciousness can occur in less than 30 minutes and death will shortly follow unconsciousness." To address suspension trauma, new full body arrest harnesses now come with a Suspension Relief Strap, which is designed to support your weight by the part of the fall arrest harness that goes around your hips. This avoids the immediate problem of restricting blood flow. But you still need to keep your legs moving to aid in pumping blood from and to your leg muscles, and keep them moving until help arrives, no matter how long that takes.

If you are not thoroughly familiar with any aspect of what I discussed above, take a refresher IBEP or Hunter Safety course; both will provide instruction and demonstrations of full arrest harness systems and how to use a suspension relief strap. If your full body arrest harness is an older model without a suspension relief strap, upgrade to a new one. Remember, nothing in the woods is as important as coming home to your family and loved ones after each hunt.

Safe Hunting!
Bob

JAMES B. OGLETHORPE

The Order of the Golden Feather has recently learned and is sad to inform you that OGF member James B. Oglethorpe has passed away. He was a former President of the VBA as well as an honored and valued member of the Association. We extend our sincere condolences to his family and friends. He will be missed.

Page 6 FLIGHT

VIRGINIA BOWHUNTERS ASSOCIATION BOWHUNTING COMMITTEE

Coming to the 2013 VBA Awards

Banquet...Mr. Hal Shaffer

Host of Drop Zone TV on The Outdoor Channel

Check them out at www.dropzonehunting.com

Well the summer is about over, the kids are back in college or getting ready to start school and hunting season is just around the corner. For some bowhunting is starting on September 1 which is the same weekend as the State Closed at Two Rivers Archery. While you are getting your gear ready to go out this fall and ordering new gear that will definitely put that big one in your sights, take a few minutes and go to www.vbarchers.com and look up the VBA bowhunting awards such as the Bill Bennett Award and the largest deer; bear; turkey; and the slams. Look over the application form so when you make your kill you'll know what you need to do to get your award at the 2013 Awards Banquet! In short, all big game taken for awards must be taken in Virginia, EXCEPT the Bill Bennett Award which can be for any deer; bear or turkey harvested in the United States. Bowhunters making kills out of country are not eligible for the Bill Bennett Award however this will be visited by the VBA Bowhunting Committee in the future.

When you make your bow harvest this year please take a picture of you and your animal, email it to me at tworiversarchery@yahoo.com and include your name, club name, county or State of kill and date of kill. I would like to display these photos for everyone to enjoy at the banquet. Not everyone can get their animal mounted that fast to get to the banquet to share and you may not mount them all, but I am sure we'd all like to see them!!!

While you are out at your local archery shop or store that sells outdoor gear, take a moment and let the manager know who you are. Tell them you are trying to help get youth involved in the outdoors and if they would mind donating a child's fishing pole; tackle box; a sleeping bag; small tent or anything we can have for a door prize table just for the youth. I have been contacting a lot of the bigger named hunting companies trying to get donations for the banquet for adult and youth. I don't have to tell you that with the economic times there are not many responses. So please try to help out and if you do get donations get them to your VBA Representative who can get them to me at the VBA meetings. See the note at the bottom of this letter to see who is donating to OUR 2013 Awards Banquet.

If you have not obtained your Virginia Hunting Regulations for the 2012/2013 hunting season you don't have to wait to get time to pick one up, go to dgif.virginia.gov now to see what is new and what dates to turn in for your vacation.

I'll see you on the range or in the woods,

Clint Keller

1212 Devin Court

Front Royal, Va. 22630

AGENDA ITEMS

AGENDA ITEMS VOTED AT SEPTEMBER MEETING:

- (6) Const.Art.3,Sect.1,Para.C, pg.1,Change to read,"Bowhunter membership" is open to individuals who reside 50 miles or greater from the nearest VBA club, upon application and payment of VBA dues set for Bowhunter members. **Tabled**
- (7) Combine the Spring 3-D Classic and Fall 3-D Championships into one State 3-D Championship. Defeated
- (8) Request to spend up to \$500.00 for the speaker for the 2013 VBA Banquet,to cover his expenses. Tentative speaker, Mr. Hal Schaefer of the national syndicated TV show, "Drop Zone". Effective immediately. **Passed**

AGENDA ITEMS FOR JANUARY MEETING:

- (1) Amend "Shooting Styles", Sect. 7, "Traditional" style for adult women, by adding, and men. Effective Jan. 2013 **Justification:** To make the men and women's traditional distances uniform. Also, 3-D shooters shoot a maximum of 30 yards in line with other national organizations.
- (2) Shooting Styles, Pg.11, Sect.7, #11, Change to read; Traditional style for women is to shoot 30 yds., maximum, in all hunter, field and animal VBA rounds. On all targets, 30 yds.and less, the adult stake will be used. Effective Jan. 2013

Justification: Need a clarification so all shoots are shot in the same way.

(3) Shooting Styles, Pg.11, Sect.7, add #13 to read: Traditional style for men is to shoot 50 yds.maximum in all hunter, field and animal VBA rounds. All targets, 50 yds. and less, the adult stake will be used. Effective Jan. 2013

Justification: Need a clarification so all shoots are shot the same way.

- (4) Remove Art. 15, Sect. 1, Para.J, Line 3, from By-laws, doing away with the unit rule. Effective Jan. 01, 2013 **Justification:** Give awards to all who earned them and avoid confusion at State Shoots.
- (5) Change Art. 4, Sect.1,of Constitution, last sentence to read" each club would aquire votes based on their previous year membership as follows:
- 1-100 = 1 vote, 101-200 = 2 votes, 201-300 = 3 votes, 301-400 = 4 votes and 401-500 = 5 votes. Effective Jan. 2013

Justification: Make voting more even. Now, 3 clubs represent 38% of votes and top 5 clubs, 54% out of 19 VBA clubs. This will make voting more fair for the smaller clubs.

NFAA Master Coach Course Was Held In VA

Two Virginia NFAA Master Coaches – Paul Vogel and Jerry Wenzel, along with nationally known Master Coach Bernie Pellerite and his wife, Jan – presented a successful Master Coach course to 13 new Master Coaches at the end of August. The Master Coach is the highest Instructor / Coach certification offered by NFAA. It is designed to prepare coaches to work with and improve archers of all levels, including elite archers who want to go that last step to excellence. It also prepares the new Master Coaches to present the NFAA Advanced Certified Instructor (ACI) certification course.

The NFAA Instructor/Coach certification is four tiered, that is it has four levels of certification. The first two levels, Basic and Intermediate are universal – they are recognized by both NFAA and USA Archery. The Basic Instructor course is designed to prepare camp counselors and youth group leaders to present safe and effective archery training to youth and beginners. Obviously, the course places emphasis on safety and basic archery form. Some camp counselors may not even have shot a bow before the course, and some are surprised that they must meet the instructor's criteria for safety, shooting a bow, correctly teaching how to shoot a bow and pass a written exam. Those teaching the Basic course work to prepare the new Basic Instructors to maintain safe training and start the youth off right. Basic Instructors are not required to belong to either NFAA or USAA.

The Intermediate course is designed to prepare an archer with some shooting experience to present archery training from beginning to intermediate levels, and to present the Basic Instructor course. The Intermediate course is most often presented to camp and youth group leaders who have archery experience and are in the position of preparing and certifying Basic Instructors for their programs. This course has also been presented to archery club members who want certification to support their club's training outreach or youth programs. Intermediate Instructors must belong to either the NFAA or USAA to receive certification.

The Advanced Certified Instructor (ACI) course is the third level in the NFAA Instructor/Coach program. The course requirements include archery experience, partly because the material presented is not well understood by someone who has not experienced the rigors of competitive archery. The course is designed to present the knowledge and skills to understand, teach and correct advanced archery form, and to understand and teach the mental/emotional game of archery, including the dreaded topic of target panic. Some of the material on the mental game and target panic was truly ground breaking when the course was upgraded by Bernie Pellerite in the early 90s. Advance Certified Instructors must belong to the NFAA to maintain certification. This level is not a universal level recognized by USAA; however, it is known to USAA as the third level in our program.

The Master Coach level is the highest certification in the NFAA program. As a result, it has usually been presented by a team of Master Coaches, sometimes with an outside industry expert supporting the training. The goal being to present the knowledge and skills with a broad range of viewpoints and experience. Emphasis is placed on in-depth understanding of the fine points of both physical form and the mental/emotional game. The art and science of coaching, and the coaches relationship with his or her athletes, is also studied.

Master Coaches represent the NFAA and its training program at the elite level – we are proud of them and expect a lot from them. We appreciate the effort put forth by these 13 new Master Coaches and look forward to their contribution to good archery in the future.

Instructors and new coaches from left to right: Bernie Pellerite, Richard Danyliw, Jan Pellerite, Tim Sconce, Sandi Sconce, Kevin O'Shea, Jenifer Stoner, John Kristoff, Kevin Brown, Leng Morris, Rick Atchison, Robin Vogel, John Wert, Jarrett Frame, Jerry Wenzel, Troy Stoner and Paul Vogel.

2012 Virginia Deer Season Forecast

2011 Virginia Deer Season Review

During the past deer season, 233,104 deer were reported killed by hunters in Virginia (Figure 1). This total included 98,874 antlered bucks, 21,008 button bucks, and 113,106 does (48.5%) and 116 deer whose sex and age was unknown. The 2011 deer kill total was higher (up 5%) than the 222,074 deer reported killed in 2010. It was in line with the last 10 year average of 230,850.

Deer kill levels were down slightly in Tidewater (down 2%), but were up in all other regions including the Southern Piedmont (up 7%), Northern Piedmont (up 8%), Southern Mountains (up 13%) and Northern Mountains (up 3%).

Archers, not including crossbow hunters, killed 17,338 deer. The bow kill comprised 7% of the total deer kill. Crossbows resulted in a deer kill of 11,001 deer or 5% of the

total deer kill. Muzzleloader hunters killed 55,420 deer or 24% of the total deer kill. Over 167,500 deer (72%) were checked using the Department's telephone and Internet checking systems. The youth deer hunting day on the last Saturday in September resulted in a reported deer kill of 1,864 animals.

Deer hunters who would like to know the current and historical deer kill data for their specific county or region can find the data on the Department's Website at www. dgif.virginia.gov/hunting/va_game_wildlife/deer_ harvest.asp.

The Department changes deer regulations every other year and just did so effective last fall. There are no major changes for fall 2012 other than the fact that several new areas have been added to the special urban archery season(s). See the new hunting digest for details.

Chronic Wasting Disease (CWD) Update

Statewide CWD surveillance of approximately 1,000 hunter and road killed deer from every county in Virginia conducted last fall (2011) did not find CWD in Virginia. Statewide surveillance programs were also conducted in fall 2002 and fall 2007, and in both cases, CWD was not detected.

However, continued mandatory sampling in the CWD Containment Area in designated portions of Frederick and Shenandoah counties detected two new CWD deer in western Frederick County in fall 2011. This brings the Virginia total to four CWD deer since fall 2009. The good news, if there can be good CWD news, is that both these animals were found very near the previous two positive Virginia animals along the Virginia-West Virginia border. West Virginia has found ~110 CWD

deer in West Virginia, mostly in and around Slanesville, WV (just over 20 miles west of Winchester, VA) since 2005.

As in past years, the Department's CWD surveillance efforts will be focused in western Frederick and northwestern Shenandoah counties in fall 2012. Once again there will be three mandatory CWD sampling days within the CWD containment area.

Lastly, the Department will continue to conduct "targeted" CWD surveillance for the rest of the state and advises all hunters and the general public to continue to help in the identification and testing of "target" animals. CWD "target" or suspect animals are defined as deer or elk 16 months of age or older that are emaciated and/or show some combination of signs, including abnormal behavior, increased salivation, tremors, stumbling, uncoordination, difficulty swallowing, excessive thirst, and excessive urination. A simple definition is an adult deer or elk that looks like it is starving and appears to have neurological disorders.

What should you do if you see a CWD target deer? First, do not attempt to contact, disturb, kill, or remove the animal. You should accurately document the location of the animal and immediately contact the VDGIF at 1-804-367-1258 or the nearest Department office. Arrangements will be made to investigate the report.

Please check the Department's Website (www.dgif.virginia.gov/wildlife/diseases/cwd/) and/or the annual hunting digest for more CWD related information.

Hemorrhagic Disease (HD) Update

Early last fall (September 2011) we received numerous calls from landowners across Tidewater and the eastern/central Piedmont about dead and/or dying deer near water. On a couple of these individual properties, 10-20 deer were found dead from HD. It appeared as though fall 2011 might be a big HD year.

However, in retrospect, it was a relatively

quiet HD year again last fall for the fifth consecutive year. It was definitely not a major HD outbreak year. The bad news is that our deer herd is primed for a big HD year. If herd immunity is an important component in HD epidemiology, Virginia's deer herd HD immunity level is probably very low.

Several years ago, DGIF staff developed an HD model which indicated that the severity of HD outbreaks in eastern Virginia can be predicted by climate data. Simply put, above average temperatures, including mild winters, combined with a June drought appear to be predictors of HD outbreaks in eastern Virginia. As 1 sit writing this article in mid May of 2012, we did not have a normal winter in 2012. Luckily we seem to be getting fairly normal rainfall levels so far. For more information about HD, visit www.dgif.virginia.gov/wildlife/diseases/bd.asp.

Tidewater Forecast

The Tidewater deer kill was down just

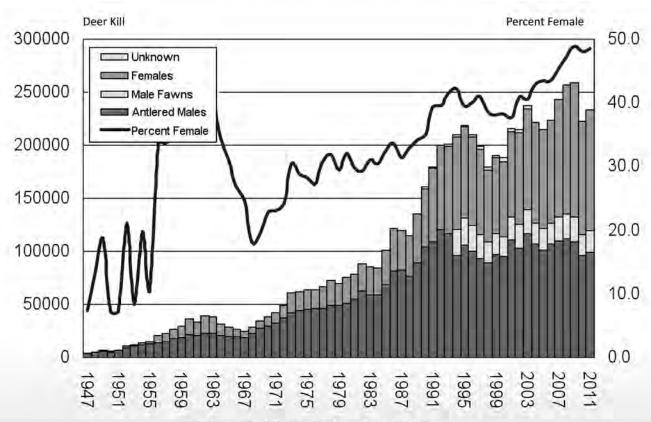

Figure 1. Virginia deer kill 1947-present

Page 18 FLIGHT

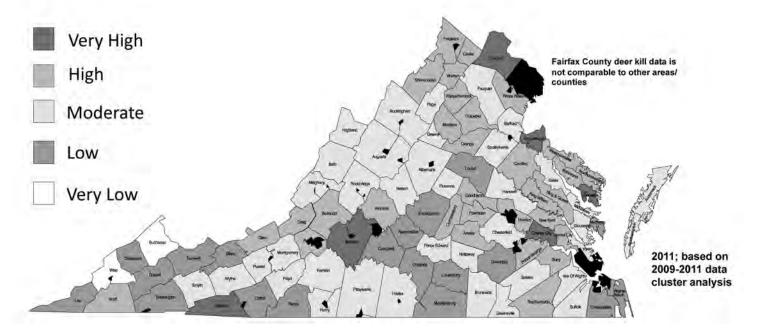

Figure 2. 2011 private land relative deer population abundance by management unit.

Index is based on a 3-year average of antiered bucks killed per square mile of estimated deer habitat.

slightly (2%) from 2010. This is good news for a region where the Department has been trying to stabilize or reduce deer herds for the past decade. Over the past decade or more, most deer herds over much of the Tidewater region have demonstrated significant population increases. To address these increasing deer populations, the Department has now put in effect full season either-sex deer seasons in all but three Tidewater counties.

Biological data indicates that deer herd condition continues to be fair to good. As has been the case in the past, deer crop damage and deer vehicle collisions remain major deer management concerns in this region. In response to high and increased female deer kill levels, Tidewater deer populations and deer kill levels should begin to decline in the future. As is usual in this region, HD may play a major role.

Northern Piedmont Forecast

The Northern Piedmont deer kill was up 8% last fall. Like Tidewater, several counties in the Northern Piedmont had demonstrated significant deer population increases in the past, and just like increasing counties in Tidewater, these Northern Piedmont deer population increases have been addressed with significant liberalization of firearms

doe days. These regulation changes appear to be gaining traction.

Increased either-sex deer hunting opportunities and cheaper bonus deer permits should benefit the Northern Piedmont deer management situation. The deer kill will hopefully be stable or down in 2012. Biological condition data indicates that overall deer herd quality in the Northern Piedmont is good. Deer vehicle collisions and urban deer issues remain a major deer management concern in this area.

Southern Piedmont Forecast

Over the past 20 years, this region has evolved into two distinct deer management areas: The South-Central Piedmont and the Southwestern Piedmont. The Southern Piedmont deer kill was up 7% from 2010.

South-Central Piedmont. Not surprisingly, most of these counties have demonstrated a significantly increasing population in the past in response to fairly conservative regulations enacted over a decade ago. Deer kill numbers in this area should be stable, but a slight increase or decrease would not be unexpected. Like Tidewater, HD could play a major role in this area.

Southwestern Piedmont. The deer management situation in the Southwestern Piedmont has not been good, and liberal regulations that have been in place for over a decade have failed to control or reduce deer herds with the notable exception of Patrick County. Hopefully, the deer kill in the southwestern Piedmont will be stable or down in fall 2012. Biological condition data indicates that overall deer herd quality in the southwestern Piedmont is good. HD does not typically play a major role in this area.

Mountain

The biggest challenge in deer management in Virginia over the past decade in western Virginia has been the decline in deer hunting and the deer kill on the public lands in the mountains. Since the mid 1990's there has been an approximate 60% decline in the deer kill on public lands west of the Blue Ridge.

Staff believes there are a number of factors involved in this decline including, but not limited to: Declining deer habitat quality on the national forest lands, significantly declining public land hunter numbers/pressure (down ~40% since the mid 1990's), predators, and liberal either-sex deer hunting day regulations enacted on adjacent private lands over the past decade. An additional issue identified by concerned public land deer hunters is a potential over harvest of antlerless deer on these public lands.

The potential over-harvest of antlerless

deer on these public lands is an issue that has already been addressed by significantly reducing the number of public land eithersex deer hunting days. The objective of these reductions was to cut the female deer kill level on these public lands by 50% or more, and these changes have been successful. Doe kill numbers and levels on public lands in many western counties are the lowest in decades.

The good news is that the public land deer herd decline has apparently bottomed out. It remains to be seen, however, if management changes will be successful in bringing back the public land deer herd(s).

Summary

The best way to compare deer populations and deer hunting potential among and between areas is based on the deer kill per square mile of habitat. Figure 2 shows the relative differences among counties in the kill per square mile of deer (antlered bucks) on private land based on an average over the past three hunting seasons. This map also indicates the relative densities of deer on private lands among counties across Virginia. This is the map of where the deer are in Virginia.

The winter of 2012, or lack of a winter in 2012, deserves special mention and should bode well for deer condition this coming year. As noted earlier, it may bode poorly for HD activity. Under normal conditions, at some point during winter, because of the cold weather and snow, most deer will begin to burn more calories than they are taking in and begin to operate at an energy deficit. They will begin burning their fat reserves. It is not unusual for deer to lose a significant amount of their body weight during winter. This did not happen in Virginia during the winter of 2012! Virginia's deer herd should have come out of the winter of 2012 in better than average condition. This should carry over to fall 2012.

What the Department has been trying to do with its deer management efforts over the past five to ten years has been to increase the female deer kill over most of the state, especially on private lands. These efforts have been very successful (see Figure 1). Nearly all of the increase in the deer kill that has taken place over the past five or so years has been an increased kill of antierless deer.

These high and sustained female deer kill levels were specifically designed to eventually lead to a decrease in the statewide deer herd and a decline in total deer kill numbers. With the exception of the three counties in the Cumberland Plateau (Buchanan, Dickenson, and Wise), the three counties in the Alleghany Highlands (Alleghany, Bath, and Highland) and on public lands west of the Blue Ridge, the Department is not trying to increase or grow Virginia's deer herd. Over a good part of the state, the Department is trying to stabilize deer herds, and over another large part it is trying to reduce deer herds. If these deer population management objectives are met in the future, over time the total statewide deer kill will be going down, not up. Thank you, support the Virginia Hunters for the Hungry program, and, most importantly, be safe.

Editors Note: Matt Knox, a regular contributor to Whitetail Times, is the deer project coordinator for the Virginia Department of Game and Inland Fisheries. Knox did his graduate study at the University of Georgia and is an avid deer hunter. The author welcomes questions and comments from our readers via e-mail at Matt.Knox@dgif.virginia.gov.

WINNIE AND WALLY'S RECIPE FOR BARBECUE DEER MEATLOAF

Meatloaf:

1Lb deer burger

1 egg

1 small onion, chopped

1cup of bread crumbs

½ cup catsup or tomato sauce

Mix well and shape into loaf

Barbecue Sauce:

1 cup of catsup or tomato sauce

½ cup Worcestershire sauce,

1 TBSP vinegar,

1 TBSP brown sugar

Mix until sugar is dissolved. Pour over meatloaf.

Cover and bake in a preheated 400 degree oven for 1hour or until done.

Whitetail Biology

Fall = Life in a Rut

essay by Matt Knox

This is part one in a series about white-tailed deer biology and how deer behavior and diet change throughout the seasons.

E veryday deer life and social interactions in the fall are dominated by the breeding season, or what deer hunters commonly call the rut. By the time the leaves begin to turn color and temperatures begin to moderate in mid- to late September, bucks start to look and act differently. This change in appearance and behavior is controlled by declining day length, or photo-period. In response to shorter days, velvet sheds from the buck's antlers and breeding season officially begins. Life in the whitetail world is about to get a little crazy.

Bucks that idly spent the summer enjoying the company of other males now become loners and view each other as competitors and adversaries. The first four to six weeks of the breeding season is spent determining their social hierarchy. To determine pecking order, bucks spar with each other. These encounters are not true fights but more like antler "shoving matches," allowing each buck to assess the strength of the other.

The day the velvet is shed, a buck will begin rubbing his antlers against shrubs and trees, making a "rub" that serves as a visual advertisement with a hidden chemical message. Typically placed in high-traffic areas, a buck rub announces his presence to the does in the area, and the chemical clues left on the rub serve to bring the does into and synchronize estrus. Smell, or scent communication, is a very important component of deer life, especially during the fall. Buck rubbing typically peaks in late September/early October but continues at some lower level until the antlers are shed in winter.

Courtship typically begins in mid- to late October, several weeks prior to actual breeding. During the early part of this courtship phase, bucks chase does in a characteristic head down posture, following the doe's scent and making a clearly audible grunt call—often trailing far behind the retreating female. Does are often chased by several bucks at the same time. Later, at closer range, the buck will often make a distinctive head down sprint toward the doe. During courtship, social hierarchy becomes very evident and aggressive interactions between bucks are common. The vast majority of these encounters end with one buck backing down. If the bucks are evenly matched and one of the bucks does not back down, a fight ensues.

During courtship, bucks make a second type of unique signpost called a scrape. Scrapes are one of the more unusual behaviors exhibited by male whitetails during the rut and ultimately result in a pawed area in the ground. To start a scrape, a buck will approach trees with a limb or branch hanging at or just above deer head height. The buck will

lick and rub the branch about his head for up to a minute. After marking the branch, he will vigorously paw a depression in the ground under the branch, using his front legs to clear it to bare earth. Lastly, he may perform what is called a rub urination. He will stand in the scrape, rubbing the inside of his back legs together at the tarsal glands while he urinates upon them. Unlike rubs, which peak early in the rut, scrapes typically appear during the courtship phase of the rut just prior to breeding.

As October comes to an end, the breeding and tending phase of the rut will begin. The peak of breeding in Virginia typically occurs in mid-November or just a little earlier. As a doe comes into estrus, she will let the dominant chasing buck approach to closer and closer distances; finally, she will stand for breeding. Does are in estrus for about 24 hours, and if they fail to conceive, will cycle again in about 28 days. After they have bred, the buck will "tend" or follow the doe, protecting her from other suitors for a period of time ranging from a couple of hours to a day or more. By late November/early December the rut is mostly over, and deer life begins to return to normal.

The basic family unit in deer society is a doe group consisting of a dominant doe, her female offspring, and all of their fawns. These doe family groups are directly related and may number from a couple of animals to a dozen or more. During the rut, doe family groups make one substantial change. At 1½ years of age when they grow their first set of antlers, male offspring are driven out of the family group and often disperse far away from their natal range. It is hypothesized that this male dispersal reduces the chances of interbreeding.

At the peak of the rut, doe family life is disrupted by the advances of the males for a couple of weeks or so. But after the does are bred, their family life quickly returns to normal.

"Normal" in the fall means finding food. During this season, a deer's metabolism converts from growing (summer) to putting on fat, and if acorns are available, they will be the most important food item—especially those of the white oak. Putting on fat will help the whitetail survive the coming winter.

Matt Knox is a deer project coordinator for the Department, serving south-central Virginia.

APPLICATION FOR VBA INDIVIDUAL ACHIEVEMENT AWARDS

Robin Hood Any VBA member that telescopes an arrow in the highest scoring area on the target. (3-D targets and Maple Leaf Animals, the arrow would only need to be in the kill area). The Robin Hood must be shot at a VBA sanctioned shoot on a VBA approved range. The scorecard must be signed by 2 witnesses, accompanied by \$5.00 and sent to the VBA Executive State Secretary.

500 Pin Any VBA member that scores 500 or better at a VBA sanctioned shoot on a VBA approved range. The round must be shot from the adult stakes on a field, hunter or field/hunter combination round. The scorecard must be signed by 2 witnesses, accompanied by \$5.00 and sent to the Executive State Secretary.

<u>Perfect Animal</u> Any VBA member that shoots a 20 or higher on each of the <u>14 unit</u> <u>animal targets</u> for a total score or 280 or more. The round must be shot from the adult stakes on a VBA approved range at a sanctioned VBA shoot. The scorecard must be signed by 2 witnesses, accompanied by \$5.00 and sent to the VBA Executive State Secretary.

Name:	VBA_Number:	_
Address:		
Phone No:	E-mail:
